

# My First Paper Computer!

A computer is a robot that follows instructions very carefully.

## **How It Works**

The computer reads one step at a time and does exactly what it says.

## **Important Parts**

Memory = where numbers live

Registers = the calculator screen

Program = the instructions

## **Reset Before You Start**

Set everything back to zero and clear the output.

## **If Something Breaks**

That's okay! Mistakes help us learn how computers think.
